# Helium Leak Detector Repair, Preventative Maintenance, Service Plans and Application Support

Even the best equipment needs a tune up occasionally and Agilent has a service option to meet your needs and budget. Application support and training are also available to help increase productivity and ensure optimal leak detector operation. Whether you have a need for service or help with proper fixturing, leak rate, or test methodology, we can help you.

## Repair, exchange, and spare parts

Let Agilent's factory-trained service engineers repair and maintain your leak detector using genuine factory parts. Our service engineers will ensure your leak detector is running properly and has the most up-to-date software. You can ship your leak detector to an Agilent service center for repair, have it repaired at your location or you can buy parts to repair it yourself.

## Service contracts and agreements

Protect your Agilent helium leak detector with a service contract and get peace of mind. Agilent factory-trained technicians will perform annual preventative maintenance procedures with the latest software upgrades and repair your leak detector using genuine factory parts as needed. As a service contract holder, you get unlimited technical support via phone, chat, or email.

Agilent service plans support HLD, VS, 959, and legacy units

## Upgrades

Trade up cost-effectively from any manufacturer's old, discontinued, or difficult to use leak detector to the newest helium leak detection (HLD) technology. The Agilent HLD series offers an easy-to-use touch screen interface, oil-free/dry pumping options, and automatic calibration with an internal calibrated reference leak. Agilent has the right leak detector model to fit any application.

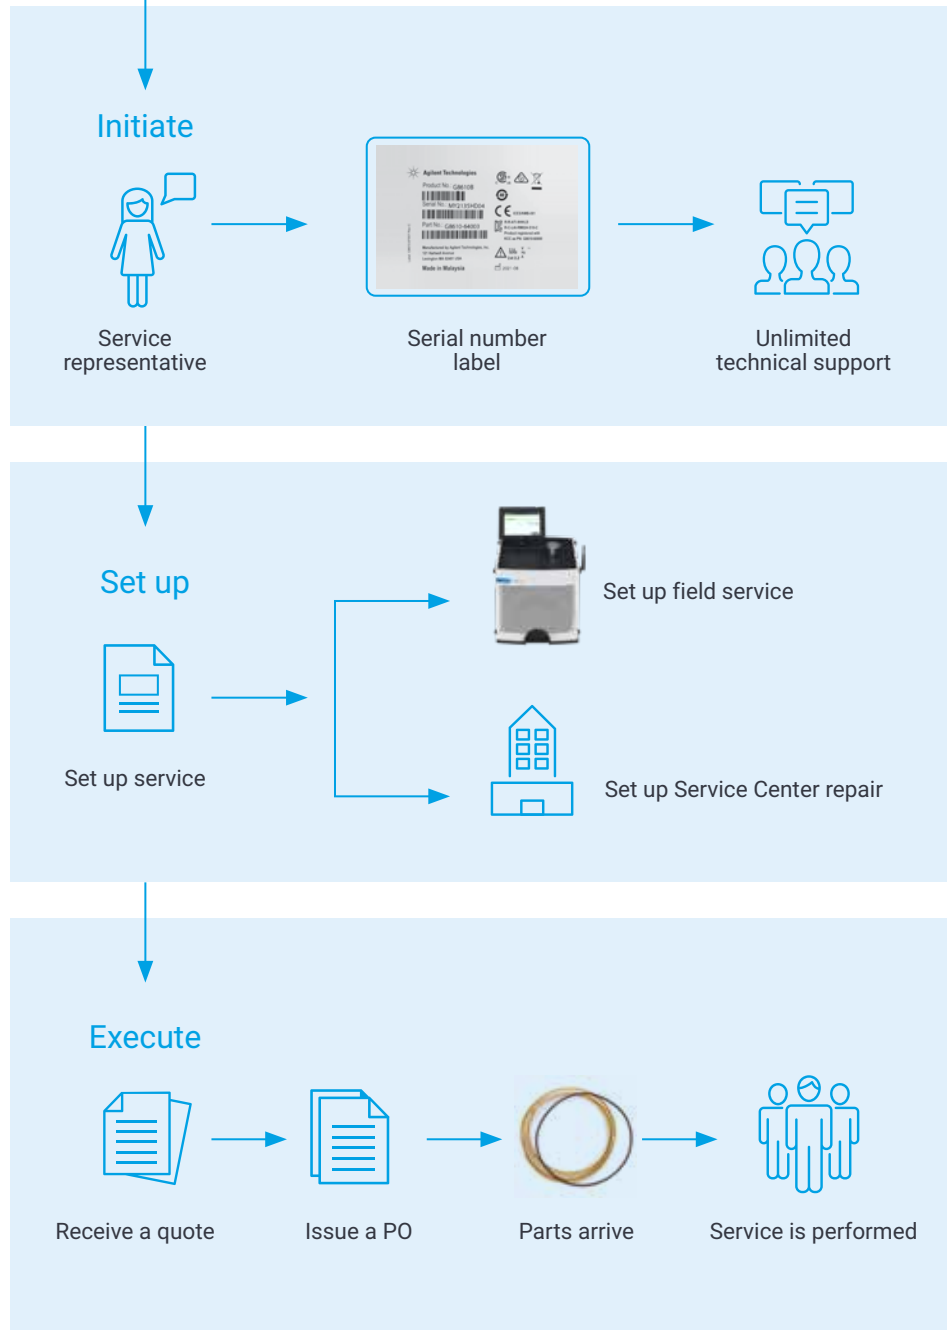

## Application and training

Whether you are just starting to use a helium leak detector or are an experienced user looking for a deeper understanding of leak detection technology and techniques, Agilent can provide basic or customized training and support. Training is offered in multiple formats to fit your needs, including at your site, at an Agilent location, or online.

# Agilent Worldwide Service Organization

Agilent is a global company with factory trained service centers and field service engineers located on four continents. For repair, support, maintenance, or customized service, contact us to keep your helium leak detector up and running.

**Call Agilent with your serial number.**  
Discuss your needs with a customer service representative.

## Helping You Find the Right Solution

### Worldwide Service Centers

Agilent has major service centers around the world that can economically service your Agilent or Varian helium leak detector. Factory trained service technicians can restore your leak detector with genuine factory parts.

### Service at your site

Field Service Engineers located worldwide are available to visit your site to keep your equipment up and running. Onsite services include preventative maintenance, calibration, repairs, software upgrades and troubleshooting.

## Choose and Customize

Choose and combine service options to customize your support plan. Call us and we can help you design a support plan based on your specific needs.

### Options for your new HLD unit

Flexibility to mix and match service products, training and coverage to go with your new leak detector.

**OEM parts for the Agilent HLD and VS.** Common parts for do it yourself maintenance are listed below. Additional parts available; please contact Agilent.

Part Number	Description	IDP-3	TS 620	IDP-15	DS 40M	DS 602
695409005	Rotary Vane Pump Oil, Elite-Z, 1L				•	•
VSFLDOV	Valve Block O-ring Kit for Helium Leak Detectors (HLD)	•	•	•	•	•
IDP3TS	Tip seal replacement kit, IDP-3 scroll pump	•				
X3815-67000	Tip seal replacement kit, IDP-15 scroll pump			•		
VSFLDHFR	Filament replacement kit for VS and HLD Leak Detector (2 filaments included)	•	•	•	•	•
670029096	Cleaning kit, for vacuum and spectrometer tube	•	•	•	•	•
VSFLDCL	HLD and VS series calibrated leak replacement	•	•	•	•	•

**OEM parts for the Agilent/Varian 959 Helium Leak Detector.** Common parts for do it yourself maintenance are listed below. For additional parts, please contact Agilent.

Part Number	Description	Wet	Dry
82850302	Ion source, dual thoriated iridium filaments	•	•
670029096	Cleaning kit, for vacuum and spectrometer tube	•	•
695409005	Rotary Vane Pump Oil, Elite-Z, 1L	•	

# Repair Service

Repair Service is required when the leak detector is not functioning because of helium spectrometer related issues. Typical symptoms that trigger a repair are burned out filaments, a “gain too high” error message, or leaks that prevent the system from calibrating. Under this predefined service the vacuum system of the leak detector is cleaned, and filaments, metal seals, and o-rings are replaced.

Agilent HLD, VS Series and 959

Overview	
Leak detector models	HLD, VS, 959
Service location	Service center, customer site
New calibrated leak and recertification	Included
Full vacuum system maintenance and filament replacement	Included
Minor maintenance on foreline pumps	Tip seals or oil change

## Repair Service

### Services performed

- Replacement of ion source and filaments
- Replacement of the internal calibrated leak. Includes ISO traceable certificate
- New o-rings and seals
- Minor maintenance of the foreline pump. Includes oil or tip seal/membrane change
- Complete inspection and cleaning of spectrometer, valve block and manifold
- Verification of vacuum system integrity, helium sensitivity and system calibration

### Additional service terms

#### Travel and logistical terms

##### At Customer Site:

- Travel charges apply based on customer location
- Local service may not be available in all locations. Contact local Agilent representative for details.

##### At Service Center:

- Customer is responsible for freight cost to factory
- Return shipping charges are dependent on location
- Shipping materials can be provided for a nominal cost

#### Limitations and exclusions

Does not cover:

- Turbo pump or foreline pump repair
- Electronics or touch screen replacement
- Replacement of external calibrated leak
- Structural or cosmetic parts, or parts not listed in "Services performed"

# Overhaul Service

An Overhaul Service is necessary when the leak detector is not functioning and needs more work than is covered by a Repair Service. Typically, this is required when either the turbo or foreline pump has failed. During an overhaul service, the leak detector is completely dismantled, the defective pump is replaced, any failed electronic PCBs are changed, and a new internal calibrated leak is installed.

# Full Rebuild Service

A Full Rebuild Service is necessary when the leak detector has a major failure and both the turbo and foreline pumps must be replaced. Agilent's technical support team can help you determine whether an overhaul or full rebuild is required. During a full rebuild, the leak detector is completely dismantled, both pumps are replaced, any failed components are changed, and a new internal calibrated leak is cleaned and installed.

# Upgrade to HLD

When an older leak detector is obsolete, cost-prohibitive to repair, or difficult to use, trade up to the latest technology through Agilent's technology refresh program. The HLD series offers an easy-to-use touch screen interface, oil-free/dry pumping options, and automatic calibration with an internal calibrated reference leak. Ten configurations are available to meet a wide range of leak detection requirements including mobile, portable and bench top models.

## Upgrade your current leak detector

Agilent offers you a cost-effective way to trade up from any manufacturer's old, discontinued, or difficult to use leak detector.

Agilent/Varian 959 Series Leak Detector  
Manufactured between 1991 and 2016

Agilent/Varian VS Series Leak Detector  
Manufactured between 2006 and 2018

HLD Portable Helium Leak Detector  
Current series

## Helium mass spectrometer leak detectors

Don't see your model? All legacy models are considered for trade-in towards a new Agilent HLD leak detector. Contact Agilent for assistance.

## Upgrade to HLD

### Upgrade advantages

- Trade in outdated equipment and upgrade to the latest technology, featuring an intuitive touch screen user interface
- Easy calibration and setup allows operators to get up and running quickly
- 24 month factory warranty
- Option to extend the warranty up to 5 years with an Agilent service contract
- Serviceability and spare parts for 10 years
- Take the opportunity to go green by switching from an oil sealed rotary vane pump to a dry scroll pump
- Dry scroll pumps maintain system cleanliness and workspace air quality, and eliminate the need for oil disposal

#### HLD Wireless Remote Control for Leak Detectors

Leaks in large systems often occur far from the leak detector. By utilizing modern wireless technology, leak testing hard-to-reach locations is now much easier and can be performed at much greater distances—up to 100 meters, far superior to Bluetooth devices.

# Recertification

Maintain leak detector calibration with a replacement helium calibrated leak and NIST traceable certificate. Recertification is designed for customers who need to maintain calibration records for their instruments due to ISO standards, or other internal process controls. A replacement leak can be self-installed onsite or installed by Agilent service at a Service Center.

# Calibration and Interim Preventative Maintenance

The Calibration/Interim PM Service is designed for customers who want a leak detector health check and who need to maintain calibration records for their instruments due to ISO standards, or other internal process controls, and want a trained technician to perform the service. This can be performed onsite or at an Agilent Service Center.

# Preventative Maintenance

Avoid unplanned downtime and costly repairs with regularly scheduled preventative maintenance (PM) service to maintain proper leak detector operation and up-to-date certification. Preventative Maintenance service includes disassembly, inspection, and cleaning of the spectrometer and valve block assembly. During this process all consumable items are replaced, including filaments, gaskets, and tip seals/oil. The internal calibrated leak is changed, and the instrument is reassembled and tested to meet performance specifications.

# Enhanced Preventative Maintenance

Avoid unplanned downtime and costly repairs with regularly scheduled preventative maintenance service to maintain proper leak detector operation and up-to-date certification. Enhanced Preventative Maintenance provides the same coverage as the regular PM plus a preventative foreline pump replacement. This includes TriScroll module exchange, IDP scroll pump exchange, or rotary vane pump exchange during the PM service.

# Bronze Plan

The Bronze contract is for users who use their Leak Detector infrequently in low demand applications. This agreement extends the factory warranty for one year and covers non-consumable parts in case of failure, and can be added at the time of Leak Detector purchase or within first year of ownership.

# Silver Plan

The Silver Contract is the recommended solution for applications that cannot afford downtime due to unplanned maintenance needs. This one-year, renewable agreement provides priority support and ensures continuous high-performance operation. In addition to the extended warranty coverage the support contract includes a yearly preventative maintenance with standard calibrated leak replacement to ensure as-new performance and standards compliance.

Overview	
Leak detector models	HLD, VS
Service location	Service center, customer site
Additional 1-year warranty coverage	Included
Unlimited technical support	Included
Annual preventative maintenance service	Included
New calibrated leak and recertification	Included

## Silver Plan

### Services included

- Full warranty coverage for parts and labor
- Unlimited telephone and email technical support and assistance
- All software updates and necessary hardware changes since product release are installed

### One preventative maintenance service per year

- Tip seal replacement for IDP pumps (PD03 and MD/BD15)
- Change foreline pump oil (oil-sealed pumps)
- Replacement of ion source and filaments
- Replacement of calibrated leak with ISO traceable certificate
- Complete inspection and cleaning of spectrometer, valve block and manifold
- New o-rings and seals
- Diaphragm pump maintenance
- Verification of vacuum system integrity, helium sensitivity and system calibration

### Additional service terms

#### Travel and logistical terms

##### At Customer Site:

- Travel charges apply based on customer location
- Local service may not be available in all locations. Contact local Agilent representative for details.

##### At Service Center:

- Customer is responsible for freight cost to factory
- Return shipping charges are dependent on location
- Shipping materials can be provided for a nominal cost

#### Limitations and exclusions

- Damage or failure caused by inappropriate use of the instrument

# Enhanced Silver Plan

The Enhanced Silver contract is the best fit for critical applications to ensure that the leak detector, including the scroll or rotary vane pump, is serviced on a regular basis to avoid unplanned downtime. This agreement offers the same coverage as the Silver Plan plus preventative foreline pump replacement (TriScroll module exchange, IDP scroll pump exchange, or rotary vane pump exchange). The instrument remains under warranty, and Agilent performs scheduled preventative maintenance during the contract period.

# Application Consulting, Familiarization, Training

Whether you are just starting to use a helium leak detector or are an experienced user looking for a deeper understanding of leak detection technology and techniques, Agilent can provide customized training and support. Designing your test method and operating your leak detector properly are key elements in successfully maintaining the quality of your products or process. Agilent offers training in multiple formats to fit your needs, including at your site, at an Agilent location, or online.

## Techniques for optimal performance and efficiency

These are three application setups that help users correctly configure their instrument for the best performance:

### Helium Spraying

Connect test object to leak detector and spray helium to find leak using "outside-in" method.

### Flapper Box

Allows testing of small helium-filled parts using an automated test sequence.

### Helium Sniffing

Connect sniffer probe to leak detector to sniff helium-filled part using "inside-out" method.

# Application Consulting, Familiarization, Training

## Application consulting

Agilent sales and applications engineers have a wealth of leak detection experience. We can help you determine the right leak detector and test method to solve your problem with virtual or onsite consultations.

With experience in leak checking applications ranging from power plants to pacemakers, application engineers can help establish the proper process for leak testing whether you need to locate leaks in your vacuum system or meet an established leak standard for quality.

## Familiarization

After purchasing a leak detector, our sales engineers will help you become familiar with your leak detector and its operation.

We will go over proper setup, installation and fixturing to test your components or locate leaks in your system and will give you full confidence in your operating procedures.

This can be done onsite or virtually to help you understand the basics of helium leak detection and be successful from the start.

## Training

Agilent has a rich curriculum of leak detection training, webinars and reference materials.

Basic Vacuum Practice and Leak Detection courses help teach the fundamentals of vacuum and leak detection in a classroom setting with additional hands-on instruction. Single or multi-day courses with an experienced Agilent Application Engineer are available.

Custom onsite leak detector training can be booked to specifically teach to your applications or challenges. Length of the training and number of attendees can be adjusted to fit your needs.

Agilent has a growing library of on-demand and live webinars that cover the basics of helium leak detection as well as specific sessions presenting best practices and methods for common applications.

# Service at a Glance

Agilent understands how important a leak detector can be to your business. We also realize that with regular and routine maintenance a leak detector can have a lifetime of a decade or more. Agilent has a service offering that will help you keep your leak detector performing like new no matter where in the world you are located. You can choose to simply do maintenance on an as needed basis, buy a contract to cover your unit for up to 5 years, or buy parts to maintain the unit yourself.
